

Qualifications

Diploma in Packaging

Module 2

Examination Syllabus 2022

Unit 1: Quality

| Topic | Candidates should understand and be able to demonstrate using detailed examples: |
|--|---|
| Quality management | <ul style="list-style-type: none"> • Quality management <ul style="list-style-type: none"> ○ definition of quality ○ quality control ○ quality assurance • Quality management systems (QMS) <ul style="list-style-type: none"> ○ QMS types and objectives ○ document control ○ QMS implementation ○ QMS operation |
| Food safety | <ul style="list-style-type: none"> • Food safety <ul style="list-style-type: none"> ○ food safety hazards • Food legislation <ul style="list-style-type: none"> ○ labelling regulations • Procedures and controls <ul style="list-style-type: none"> ○ allergen control ○ GMP • Hazard Analysis Critical Control Point (HACCP) <ul style="list-style-type: none"> ○ prerequisite programmes ○ key stages in a HACCP analysis ○ maintaining a HACCP system • Food integrity <ul style="list-style-type: none"> ○ threats and vulnerability control (TACCP VACCP) |
| Laboratory and at-line analysis | <ul style="list-style-type: none"> • Key analyses on beer and cider • Key analyses on packages • The basic concepts applied to interpretation of analytical data <ul style="list-style-type: none"> ○ sampling requirements ○ setting specifications • Lab operation <ul style="list-style-type: none"> ○ lab certification ○ the relevance of inter-laboratory collaborative checks |
| Statistical process control and inline control | <ul style="list-style-type: none"> • Statistical process control <ul style="list-style-type: none"> ○ causes of variation ○ statistical analyses of variation ○ inline analyses and control • Control charts <ul style="list-style-type: none"> ○ run charts ○ X-bar and R charts • Process capability • Calculation of Cp and Cpk |

| | |
|--|---|
| | <ul style="list-style-type: none"> • Application of control charts • Inline process control |
|--|---|

Unit 2: Hygiene

| Topic | Candidates should understand and be able to demonstrate using detailed examples: |
|--|---|
| Hygiene | <ul style="list-style-type: none"> • Design principles for hygienic packaging • CIP principles <ul style="list-style-type: none"> ○ factors affecting cleaning system performance ○ composition of soil, scale and biofilms ○ microbiology of cleaning ○ safety requirements • Detergents and sanitising agents <ul style="list-style-type: none"> ○ detergent and sanitiser chemistry • Design and operation of CIP systems <ul style="list-style-type: none"> ○ design principles ○ CIP of vessels, pipework, hoses and fillers ○ types of CIP systems and their optimisation • Measurement of cleaning effectiveness |
| Types of microorganism | <ul style="list-style-type: none"> • Microbial contamination of liquid product <ul style="list-style-type: none"> ○ sources of microbial contamination ○ typical microorganisms ○ effects of typical contaminating microorganisms |
| Microorganism detection and identification | <ul style="list-style-type: none"> • Microbiological sampling methods • Methods of detecting and identifying and quantifying contaminations |

Unit 3: Planning and Line Design

| Topic | Candidates should understand and be able to demonstrate using detailed examples: |
|-------------------|--|
| Capacity planning | <ul style="list-style-type: none"> • Business strategy <ul style="list-style-type: none"> ○ operations strategy • Strategic planning <ul style="list-style-type: none"> ○ mission, vision and values ○ strategic planning process • Capacity • Capacity planning <ul style="list-style-type: none"> ○ capacity planning strategies • Strategic and tactical planning |

| | |
|----------------------|---|
| | <ul style="list-style-type: none"> ○ the difference between the two and the key elements of strategic and tactical plans ● Forecasting demand <ul style="list-style-type: none"> ○ market and category forecasting ○ methods for forecasting demand ● Enterprise resource planning |
| Operational planning | <ul style="list-style-type: none"> ● Operational planning <ul style="list-style-type: none"> ○ planning and scheduling ● Master production schedule ● Bill of materials ● Material requirements planning ● Manufacturing requirements planning ● ERP systems ● Just in time <ul style="list-style-type: none"> ○ Kanban ● Vendor and customer managed inventory |
| Line design | <ul style="list-style-type: none"> ● Line design theory <ul style="list-style-type: none"> ○ principles of line design ○ design constraints ● Elements of line design <ul style="list-style-type: none"> ○ location of warehouses, labs and product supply ○ machine accessibility ○ health and safety ○ information systems ○ material storage and supply ● The V curve <ul style="list-style-type: none"> ○ line balance and accumulation ○ advantages and disadvantages of line layout formats ○ line design calculations ● Conveyors <ul style="list-style-type: none"> ○ design ○ set up ○ large pack conveyors ○ small pack conveyors ○ air conveyors ● Waste <ul style="list-style-type: none"> ○ waste handling ○ floor and drain design |

Unit 4: Large Pack Operations

| | |
|--------------|---|
| Topic | Candidates should understand and be able to demonstrate using detailed examples: |
|--------------|---|

| | |
|--|---|
| <p>Fundamental considerations</p> | <ul style="list-style-type: none"> • Role and importance of keg and cask beer and cider • Kegs, casks and spears <ul style="list-style-type: none"> ○ keg/cask components ○ keg manufacturing and materials ○ types of spear and spear safety ○ mini keg manufacture • Typical keg and cask line layouts <ul style="list-style-type: none"> ○ schematic diagrams showing configuration of complete line with all key plant items and conveying ○ simple flow diagrams showing key plant items and product flow ○ pneumatic cylinders in packaging |
| <p>Pre-filling operations</p> | <ul style="list-style-type: none"> • Container collation methods • Pallet conveying and inspection • De-unitising and depalletising <ul style="list-style-type: none"> ○ robot depalletisation • Selective keg turning • Cap or bung removal • External keg and cask washing and label removal • Cask and keg inspection • Keg spear torque testing |
| <p>Theory and practice of keg and cask filling</p> | <ul style="list-style-type: none"> • Large pack container cleaning <ul style="list-style-type: none"> ○ infeed conveying ○ pressure check ○ cleaning process steps, parameters and objectives ○ monitoring and validation • Container sanitisation <ul style="list-style-type: none"> ○ steam ○ hot water ○ chemical • Filling theory and principles <ul style="list-style-type: none"> ○ the filling cycle ○ filling non-returnable kegs and mini kegs • Design and operation of cleaning/filling machines <ul style="list-style-type: none"> ○ lane cleaning/filling machines ○ rotary cleaning/filling machines |
| <p>Post-filling operations</p> | <ul style="list-style-type: none"> • Container tracking <ul style="list-style-type: none"> ○ purposes of container tracking ○ container security ○ transponders, labels and etching ○ systems for tracking • Contents verification <ul style="list-style-type: none"> ○ volume calculations ○ weighing systems • Labelling, coding and capping <ul style="list-style-type: none"> ○ purpose of labels and caps ○ design and operation of labelling machines ○ design and operation of capping machines |

| | |
|------------------|--|
| | <ul style="list-style-type: none"> ○ label and cap validation ● Leak detection <ul style="list-style-type: none"> ○ detection of hydrocarbon contamination ● Unitising ● Warehousing <ul style="list-style-type: none"> ○ use of automated guided vehicles ○ temperature control and stock rotation |
| Draught dispense | <ul style="list-style-type: none"> ● Design and operation of dispense equipment ● Dissolved gas control ● Temperature control ● Hygiene |

Unit 5: Operations Management

| Topic | Candidates should understand and be able to demonstrate using detailed examples: |
|------------------------------|---|
| Line operations | <ul style="list-style-type: none"> ● Operating practices <ul style="list-style-type: none"> ○ organisational structure, culture, roles and responsibilities ○ shift working ● The packaging team <ul style="list-style-type: none"> ○ team working ○ training needs and development ○ multiskilling ○ interface with other departments ○ maintenance planning ● Measuring performance <ul style="list-style-type: none"> ○ performance measures and their impact on plant efficiency and losses ○ SMART targets ○ efficiency calculations ○ time calculations ○ changeovers ○ SMED |
| Supply chain and procurement | <ul style="list-style-type: none"> ● Supply chain operating principles <ul style="list-style-type: none"> ○ value chain ○ customer/supplier relationships ○ material flow ● Markets and suppliers <ul style="list-style-type: none"> ○ supply sourcing ○ vendor selection ○ supplier appraisal ● Specifications and tenders <ul style="list-style-type: none"> ○ tender process ● Contract management <ul style="list-style-type: none"> ○ supplier relationships |

| | |
|--------------------|---|
| | <ul style="list-style-type: none"> ○ service level agreements ● End to end procurement suites |
| Finance | <ul style="list-style-type: none"> ● Financial reporting <ul style="list-style-type: none"> ○ balance sheet ○ cashflow statement ○ profit and loss statement ● Financial ratios ● Cost accounting ● Construction of departmental budgets <ul style="list-style-type: none"> ○ zero based budgeting ○ incremental budgeting ○ fixed versus variable cost budgeting ● Management level financial reporting <ul style="list-style-type: none"> ○ annual budgets and period operating statements ○ variance reporting |
| Project management | <ul style="list-style-type: none"> ● Revenue and capital projects ● Project justification <ul style="list-style-type: none"> ○ investment consideration and analysis ○ return on investment ● Project lifecycle ● Roles and responsibilities ● Project constraints ● Project timeline tools <ul style="list-style-type: none"> ○ Gantt charts ○ PERT ● Dealing with delays ● Project cost management |

| | |
|----------------------------------|--|
| <p>World-class manufacturing</p> | <ul style="list-style-type: none"> • WCM origins and modern form • WCM structure <ul style="list-style-type: none"> ○ management and technical pillars • WCM people and culture <ul style="list-style-type: none"> ○ WCM culture ○ involvement of people ○ cross-functional teams • Continuous improvement <ul style="list-style-type: none"> ○ PDCA, OPDCA and SDCA ○ visual tools ○ root cause analysis tools • Lean manufacturing <ul style="list-style-type: none"> ○ forms of waste ○ 5S ○ TPM ○ standard operations ○ Kaizen ○ JIT and Heijunka ○ Jidoka, Poka yoke, Andon and autonomation ○ Lean supplier and customer relationships • World-class quality <ul style="list-style-type: none"> ○ TQM ○ ISO systems ○ EFQM • Six Sigma • Other WCM tools <ul style="list-style-type: none"> ○ short interval control ○ value engineering |
|----------------------------------|--|
